L1 State description

D1–D5 evidence

L2 Cross-dimensional interpretation

D1–D3 related to D4–D5

L3 Conditional scenarios

D6 under stated options

Question

What are the field boundaries, cropping system, facilities, crop condition and realized yields?

How do resources, facilities and management relate to yield across comparable seasons and fields?

Which feasible option could raise sustained capacity relative to a specified reference?

Evidence required

Field boundaries, dated crop labels, facility records, dated management records, crop condition and yield records

Matched multi-season records for comparable fields; one high-yield season does not establish sustained capacity

A specified reference, water, nutrient and other resource constraints, and validated response estimates or trial evidence

Output

Reported states with their validation status

Associations and plausible explanations, with alternatives retained

Scenario comparison; benefits quantified only with validated response evidence

Without matched records or validated response estimates, the assessment identifies the relevant questions and evidence gaps and leaves management benefits unquantified.
